

IV. CONTENTS OF THE 6th EDITION

The 6th Edition consists of all texts published in the 5th Edition, which may subsequently have been revised or corrected, and new texts.

For the information of the reader, lists are given below of monographs and general chapters that are new, or that have been revised, corrected or deleted, and texts whose title has been changed for the 6th Edition.

The version date (01/2008 for volume 6.0) and the reference number (4 digits for monographs and 5 digits for general chapters) are specified above the title of each text (monographs and general chapters). The version date makes it possible to identify the successive versions of revised texts in different volumes of the 6th Edition. Corrections that are indicated by the note ‘corrected 6.0’ under the version date are to be taken into account from the publication date of the volume.

For the 6th Edition, the following systematic modifications have been made to the texts of the European Pharmacopoeia.

- In the test for loss on drying (2.2.32) in the monographs, the temperature range of 100–105 °C has been replaced by 105 °C alone (as the general method states that drying is carried out at the prescribed temperature ± 2 °C), to follow the approach adopted by the Pharmacopoeial Discussion Group for pharmacopoeial harmonisation.
- In the test for loss on ignition in the monographs, a temperature range has been introduced.
- In tests using atomic absorption spectrometry and atomic emission spectrometry, the precision of the limits has been increased.
- In the Characters section, ‘white’ has been replaced by ‘white or almost white’.
- In the Labelling section, it will no longer be mentioned that, where appropriate, the label includes statements that the substance is free from bacterial endotoxins, free from pyrogens and sterile since this information is already included in the general monograph *Substances for pharmaceutical use* (2034). This also applies to the indication of the name and the concentration of any added substance (excipient, antioxidant, etc.).
- In the transparency list, letters designating an impurity followed by ‘deleted’ will no longer be included in the monographs; it is now permissible for the list of impurities to be discontinuous.
- Where appropriate, the *Chemical Abstracts Service* (CAS) registration numbers are given for information in the monographs.
- The retention factor R_f has been replaced by the retardation factor R_F .
- In monographs on antibiotics, the upper limit of content has been increased to 102 per cent when an assay is carried out using liquid chromatography.
- In monographs on antibiotics, where appropriate, the definition mentions that the substance is a ‘semi-synthetic product derived from a fermentation product’ or a ‘fermentation product’.
- In monographs on herbal drugs, the usual limit of 2 per cent *m/m* for foreign matter has been moved from general method 2.8.2. *Foreign matter* to the general monograph *Herbal drugs* (1433); this information has therefore been deleted from the specific monographs for drugs covered by this general monograph.
- In monographs on herbal drugs, the reference to identifications A and B (macroscopic and microscopic descriptions) has been deleted from the Characters section.
- In accordance with the general monograph *Substances for pharmaceutical use* (2034), the content of residual solvent is taken into account for calculation of the assay content of the substance, the specific optical rotation and the specific absorbance. This information is therefore no longer indicated in the specific monographs concerned.
- The general monographs *Herbal drugs* (1433) and *Extracts* (0765) specify storage protected from light; this information has therefore been deleted from the specific monographs on substances and preparations covered by these general monographs.
- A reference to general chapter 2.1.2. *Comparative table of porosity of sintered-glass filters* has been added whenever reference is made to ‘sintered-glass filters’.
- A reference to general chapter 2.9.12. *Sieve test* has been added whenever particle or granule size is indicated by a sieve number.
- A reference to general chapter 5.9. *Polymorphism* has been added to monographs in which polymorphism is mentioned.
- Where the heading ‘Other detectable impurities’ appears in the Impurities section of a monograph, it is now followed by: ‘(the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*)’.
- Many monographs have been converted to the new editorial style, which does not entail any changes to their technical content. The list of monographs on chemical substances and herbal drugs concerned is available on the EDQM website.

A vertical line in the margin indicates where part of a text has been revised or corrected. A horizontal line in the margin indicates where part of a text has been deleted. It is to be emphasised that these indications, which are not necessarily exhaustive, are given for information and do not form an official part of the texts. Editorial changes are not indicated. Individual copies of texts will not be supplied.
